

Bingen Summer School 2010

EDUCATION

SCIENCE

INNOVATION

What is Bingen Summer School?

Bingen Summer School is a joint initiative of the University of Applied Sciences Bingen and our associated universities (please check our web site www.fh-bingen.de for a complete list). As our academic staff come from all over Europe and the USA, Bingen Summer School proves to be a truly international and multicultural event.

We aim at uniting undergraduate students interested in the vital issue of climate change. Bingen Summer School is supposed to provide knowledge, insight along with tools for further studies. In addition to the main subject there are workshops on national and local business behaviour including an introduction into the German language.

English is the working language. In order to assure active participation of all students, a sound command of English in all respects is prerequisite.

Bingen Summer School 2010

- Environment and Climate Change
- Reasons and results of climate change - a multidisciplinary approach on the impacts on our environment
- Intercultural aspects - German language in business and German Economy
- Excursions and company tour

The main subject will be developed in several teaching blocks consisting of lectures, workshops, and seminars. In order to prepare the final essay, tutorials and study sessions are organised in the afternoon.

Preliminary Programme:

Sogn og Fjordane University College, Sogndal, Norway:

- Geology and the history of climate change
- World heritage Site Nærøyfjord – people and landscape between past and future.

École Nationale Supérieur d'Ingénieur de Bourges (ENSIB), Bourges, France

- Fundamentals in image processing and environmental applications

Sheffield Hallam University, Sheffield, Great-Britain

- Environmental Management systems and standards

Mikkeli University of applied sciences, Finland

- Impacts of climate change on surface water quality

Universita ca Foscari Venezia, Italy

- Atmospheric pollution – effects of pollutants on organism

University of Applied Sciences Bingen, Germany

- The Kyoto Protocol in practice
- Economic impacts of climate Change
- The role of law in environmental protection
- Basics of meteorology
- Challenges to nature conservation in German
- The end of fossil fuels and the dawn of renewable energies
